

24 HOUR PH IMPEDANCE

This test is completed by a nurse. It is a test that measures the acid and different types of fluids in the esophagus during a 24-hour period.

A thin tube will be placed in the nose and advanced into the esophagus. The tube will be taped to your nose and connected to a monitor that you will wear for the next 24 hours. You **MUST** return the **NEXT** day to have it removed.

	Please arrive 30 minutes prior to your scheduled time.
	You may not have anything to eat or drink after midnight prior to have the tube placed.
	No smoking.
	Wear a shirt or blouse that buttons down the front.
	You may want to shower/bathe before your procedure, as you will not be able to while the tube is in place.

Test results will be given to you by your physician at a later date.
Please allow 7-10 days for test results.

Thank you for following these instructions.
