

ESOPHAGEAL MANOMETRY STUDY

Your physician has ordered this test for you which involves measuring the pressure and muscle action of the upper GI tract. A small, flexible tube is inserted into your nose and down into your stomach. This is done without sedation and is done very gently. The catheter is connected to a very complex machine. This test helps your doctor diagnose your illness and plan of treatment.

PLEASE READ AND FOLLOW THESE INSTRUCTIONS:

	<p>On the day before your test, you may eat your regular meals.</p>
	<p>Nothing to eat or drink after midnight before your test - this includes medicines, nitroglycerins, gum or mints. Do not swallow toothpaste and do not smoke.</p>
	<p>Wear a shirt/blouse that buttons down the front.</p>
	<p>You will need to check in at the office front desk 30 minutes prior to your test.</p>
	<p>You will be at our office approximately 1 hour.</p>
	<p>You do NOT need a driver - this is done without sedation.</p>
	<p>Test results will be given to you by your physician at a later date.</p>

Thank you for following these instructions.
